

MESO SLIM & MESO FIRM

Skin tightening sessions

SAGGING & EXCESS SKIN are common signs of ageing. Our sessions stimulate natural processes in your skin to make it look and act **younger, fresher and firmer**.

Collagen is a key component of your skin's elasticity and firmness. Our collagen remodelling treatments help skin become more elastic and firm. Skin is tightened and lifted & sagging areas are brought closer to their original forms

Cellulite treatments

CELLULITE is created from toxins and retained water stagnating in your body. Cellulite manifests in an uneven, **unhealthy looking skin** (described as orange peel look).

Cellulite doesn't happen on top of your skin – you can't wipe it away with a cream. Cellulite forms deep within your skin's inner layers. That's why you need a cellulite treatment that reaches deep in your skin to work inside the cells

- lift excess & loose skin
- target cellulite & stretch marks
- reduce localised stubborn fat deposits
- slim and tone up area by area
- invest in proven products that actually work

Why Meso works

Using a medical grade electroporation device, a unique cocktail of vitamins, minerals, and extracts is administered into **deeper layer of the skin** to target **STUBBORN FAT DEPOSITS** and the root cause of **CELLULITE**.

- Fat cells are broken down
- Blood circulation is increased
- Collagen strengthened

Stimulation of beta receptors occurs to prevent future fat build up. Therapy supports the skin on all 3 levels:

- EPIDERMAL** - cellular renewal, allows formula penetration
- DERMAL** - synthesises collagen/elastin, tones/firms up skin
- HYPODERMAL** - promotes micro-circulation as well as fat metabolism & toxins evacuation

Added benefits

- Improved blood flow to area
- Lymphatic drainage
- Dissolved excess localised fat deposits
- Evacuation of liquefied fat
- Soften fibrotic, hardened connective tissue
- Permanent improvement in quality of skin

Safety

Treatments have no side effects except of minor skin rash post treatment (less than 2%)

There is no surgery, no damage to nerves, blood vessels and connective tissue. No such questionable methods as radio frequency or ultrasound are used! (*Longer term effects for these methods are simply unknown*)
